

STYLIZED LISTS

A convenient way to display information on any website is through the use of lists, often a simple arrangement of items in an unordered bulleted list. With the use of Cascading Style Sheets (CSS), there are numerous ways to style lists visually. Bullets can be squares or circles, and you can replace them with graphics, alternating row colors or other items to denote a list of similar items. Following are examples of stylized lists from sites in this study.
